Foreword

WE offer herewith our revised complete price list on Koll's Patent Lock-Joint Staved Wood Columns for exterior and interior work. In compiling this list our aim was to make the same as complete as possible to enable the trade to secure an estimate promptly on all size columns, both large and small. Our hope is that it will be of some real service to the trade and used to our mutual advantage.

Product

In addition to Koll's Patent Lock-Joint Staved Wood Columns for both interior and exterior work in all woods as well as veneered columns, we manufacture Pilasters, Square Columns and Porch Materials to architect's detail; Pergolas, Lattice Work for interior and exterior purposes, and Garden Furniture, Special Mill Work.

The Lock-Joint Stave

We are the originators of "KOLL'S PATENT" Lock-Joint Wood Stave Columns, which cannot come apart.

Our Patent of the Correct Entasis

Correct Entasis Secured in Forming Stave Itself.—All columns manufactured under Koll's Patents are made in our own factory. Every shaft being turned in the lathe, thereby permitting the proper entasis to be secured. The staves are straight one-third and swell-tapered upper two-thirds, so that when shaft is formed the correct entasis is obtained in the rough, securing enough stock at top and bottom of shaft to permit our turning to proper detail and for fluting to form top and bottom turnout or neck-moulding, if any is called for on the shaft itself, without cutting too close to joint. These points of construction will be appreciated by the architect, but are found lacking in other so-called "lock-joint" staved columns.

Quality and Kinds of Lumber

All exterior columns are made out of lumber selected by us with a view of providing the best lumber for column work that money can buy. As our columns are furnished with a guarantee as to their workmanship and durability, we reserve the right to use such lumber, which in our opinion, is best suited for the locality in which the columns will be used. We have a large supply of weather seasoned stock on hand at all times.

Thickness of Stock

As the price of a column is regulated largely by the amount and kind of lumber that enters into its construction, it is very important to state the thickness of stock of which you wish the columns made. Our experience as specialists in column construction has demonstrated

to us that the thickness of stock for the various sizes as called for in the table shown below will provide enough material to carry out the architectural detail properly and afford sufficient strength. Should an unusual load be placed on the columns, they can be reinforced by inserting a timber or iron column.

Style A

Style B

Style C

With Cove on Shaft like Style "A"		2-in. Stock	2½-in. Stock	3-in. Stock	4-in. Stock
Plain Shaft.....		Up to 16 in.	17 in. to 22 in.	23 in. to 30 in.	31 in. and up
Ionic Fluted.....		Up to 16 in.	17 in. to 19 in.	20 in. to 27 in.	28 in. and up
Doric Fluted (No. 195).....		Up to 22 in.	23 in. to 28 in.	29 in. to 39 in.	40 in. and up
Cove Planted on like "B" or made a Base Member like "C"		1½-in. Stock	2-in. Stock	2½-in. Stock	3-in. Stock
Plain Shaft.....	Up to 12 in.	13 in. to 22 in.	23 in. to 30 in.	31 in. to 40 in.	41 in. and up
Ionic Fluted.....	Up to 10 in.	12 in. to 22 in.	23 in. to 28 in.	29 in. to 38 in.	39 in. and up

Before ordering columns, it would be well to examine your detail closely and note if the cove is to be part of the shaft or if this can be planted on. We can make the column either way, but of course will have to be guided by what your specifications and details call for.

Splice Joint

In addition to the perfect lock-joint we use to unite the staves of the column together, we have devised a dove-tailed joint to splice the butt-ends of the staves if the length of columns calls for material longer than can be secured in one piece. It is practically impossible to make a tight butt-joint without this splice. These joints are put together with waterproof glue under screw pressure. These added features make our column mechanically perfect.

Waterproof Glue

The staves of all columns, their caps and bases, and all exterior work produced by us is put together with cold water waterproof glue. We waterproof the inside of all columns and pilasters above 14 inches with a special waterproofing compound.

Making Columns in Halves

We can make columns in two halves and put them together with hardwood dowels, so that they can be placed around an iron or other structural timbers already in position.

Stopping Flutes

We stop all flutes properly, by means of an attachment to our machines, at a comparatively low cost; the expense of doing this part of the work by hand accounts for its absence on many columns being offered to the trade and on others now in use, an omission that is fatal to the proper architectural effect. We are prepared to furnish columns with any style of fluting or reeding desired.

Steel Reinforcement

A Corrugated Steel Band or Ferrule Reinforcement, as illustrated, is applied to the bottom end of all DORIC COLUMNS that have no base. This is a valuable feature in this type of column, owing to the absence of the base, which permits the water to run under the column, unless it is scribed very closely to porch floor. The steel band, while adding considerable strength to the shaft, permits of some flexibility so that not much injury can be done by moisture that may be absorbed. We also add this reinforcement to both ends of large columns.

Cast Iron Ventilated Plinth

When columns rest on cement, brick or stone floors, we recommend the use of Cast Iron Ventilated Plinths. This will keep the moisture, which is more or less in floors of this kind, from the inside of columns. These plinths have a smooth finish and when painted they harmonize with the finish of the column. See page 33 for further information.

Ventilated Wood Plinth

All exterior columns, with the exception of No. 190 and No. 195 and also No. 195²/₃, are provided with ventilated wood plinths, unless otherwise specified. See page 33.

Flashing of Exterior Caps

All Composition or Wood Caps used on Exterior Columns should be flashed with Galvanized Iron, Sheet Lead or Copper. For further information, see page 33.

Details

Unless specified to the contrary when ordering, all columns are made according to the proportions of the styles of architecture as shown by the various cuts in this catalog, but we can, if desired, make them according to the architect's detail.

Instructions for Ordering Columns and Pilasters

When ordering columns from our catalogue refer always to our Catalogue Numbers—give quantity wanted and size at largest and smallest diameter of shaft, and length over all. State if for INTERIOR or EXTERIOR use. A glance at the cut below will show where measurements are usually taken.

You will be safe in using our catalogue numbers. All our details are carefully planned from the dimensions given by the approved authorities, but we make no extra charge for following your detail, if similar to any of the designs shown in our catalogue.

When ordering pilasters to match columns, give dimensions at top as well as bottom of shaft, or state whether width is to be equal to the largest or smallest diameter of the column, or if they are to have the mean diameter of column shaft or if they are to have the same taper as the column. This, you will note, makes four ways of making square columns and pilasters, and unless we know what is wanted, we cannot enter the order. Give also depth of return. Refer to line drawing of sections of columns and pilasters below when ordering.

We prime all exterior and interior columns (unless made of hardwoods) one coat of lead and oil unless otherwise notified. As interior columns are often stained, this would cause trouble, so that you ought to state in your order if you wish them primed or not. We make no extra charge for priming.

When composition caps are to be used, we furnish without extra cost suitable wood dowels with columns to carry the weight of the overhead work. For instructions in ordering composition capitals, see page 34.

State where and to whom you wish shipment to be sent; also whom you desire to have notified of shipment.

We will promptly furnish estimates on any special column or pilaster work according to architect's drawing and full size details. Our experience with work of this character enables us to correctly interpret the wants of the most discriminating architect.

Specifications

As a guide to the architect, we offer the following paragraph for properly specifying our columns in his specifications:

"Columns to be the Koll's Patent Lock-Joint Staved Wood Column, manufactured by the Hartmann-Sanders Co., Chicago and New York, to be made according to their design No. (here specify the number in catalogue and if design is to be made according to the architect's drawings say: To be made according to details furnished). Staves to be made out of inch stock (here specify the thickness wanted). See schedule on page 3 for thickness of staves necessary for the various sizes of columns. Shafts, Bases and Caps to be glued with waterproof Cold Water Glue; for staves longer than ordinary lumber length, the staves are to be lengthened with a splice joint. The top of all column caps is to be flashed with galvanized iron (sheet lead or copper). The flashing to extend half-inch over the edge of caps. The square plinths of column to be Cast Iron ventilated plinths (or proper ventilation to be provided for the columns if stone, concrete or wood plinths are to be used). Columns to be primed at the factory with a coat of White Lead and Oil on the outside and all columns above 14 inches to receive a coat of waterproof asphaltum paint on the inside of shaft.

"Should the columns arrive at the building before they are ready to install, they must be stored in the building, or properly protected with waterproof coverings in a thorough manner, including both ends, and top of the column shafts. Do not lay columns directly on the ground."

Pergola and Bathhouse on Estate of Everett Colby, West Orange, N. J.
Lewis Colt Albro, Architect

Pergola Work

Because of the exposure columns are subject to when used for Pergola work, the absolute security of "Koll's Patent Lock-Joint" makes our columns particularly desirable for work of this character.

We are prepared to furnish all material for Pergolas above the foundation, all fitted, ready for erection.

Our experience with this class of work enables us to advise intelligently on this very interesting Garden Feature.

Octagon Column

No. 175
Square Column
Paneled with Ornamental
Pendants

No. 180
Square Column
Plain Shaft

To those not yet familiar with the quality of our work and our facilities for manufacturing columns, will say that we have a factory of forty thousand square feet floor space, which gives us the largest and best equipped factory building devoted exclusively to this class of work; and with twenty-two years of experience behind us, we have been able to perfect the organization of the various departments of our factory so that the different parts of the work are done by men particularly trained in correct column construction both from a mechanical as well as architectural standpoint.

HARTMANN SANDERS COMPANY

New York

Hardwood Columns Both Staved and Veneered

We are prepared to furnish columns for interior purposes in all hardwoods, either staved up or veneered. The veneered columns are made with our Lock Joint construction and veneered according to the most approved methods. Owing to the great variation in the prices of lumber entering into the manufacture of interior columns, we are not in position to publish an intelligent price on the same, but would be pleased to submit estimates upon application.

Lattice Work

We have a department for the manufacture of lattice work of all kinds for interior and exterior purposes and solicit inquiries on work of this character.

These cuts illustrate how the flashing should be applied.

Flashing of Caps of Exterior Columns

The flashing of both wood and composition caps is so frequently omitted in the installation of columns, we deem it advisable to call attention to the importance of this feature. If the entire top of caps is not covered with the flashing of either galvanized iron, sheet lead or copper, the water, snow and ice that strikes the cornice or fascia, is bound to run into and down the cap, effecting its ultimate disintegration. Furthermore, if the moisture has access from the top to the inside of the column, it will cause swelling of the material, thereby injuring the attractive appearance of the column.

Architects should see that this very important feature is not overlooked in their specifications, for all exterior columns. We are prepared to furnish these flashings for a slight additional charge over the price of the columns.

We have found from careful and extended study of ventilated cast iron plinths that they have filled a long-felt necessity. They not only eliminate the annoyance very often caused by the checking, dishing and ultimate decaying of mitred wood plinths, but also provide for the circulation of air to the inside of column shaft, which is a very essential feature. We are prepared to furnish ventilated cast iron plinths at a nominal cost in order to encourage their use. They are finished smooth and given one coat of mineral paint at the factory, and when painted on the job, they harmonize with the finish of the column.

Ventilated Cast Iron Plinths

Price of Square Cast Iron Ventiladed Plinths

35 "	47 ¹ / ₂ " "	8 ¹ / ₂ "	71.90
36 "	48 ³ / ₄ " "	8 ³ / ₄ "	79.20

The sizes given for square iron plinths are also the size of square wood plinths.

Composition Caps

We manufacture our own Capitals of Composition for columns and pilasters.

All ornamental caps shown on the various column designs in this catalog are made of composition.

All our stock models are made of the proportions called for by the various orders of architecture. They are made of a fibrous material. Caps for exterior use are treated to withstand the deteriorating influence of the weather; those for interior use can be stained to match any finish of woodwork.

We are prepared to make special models according to architect's details.

The tops of exterior caps should always be flashed with galvanized iron, sheet lead, or copper; this is important and should not be overlooked. See page 33.

Instructions for Ordering Composition Caps

In ordering capitals give number and size required and state whether for exterior or interior use.

Diameter of column should be taken where shown on Fig. No. 1 for Corinthian, Erechtheum, Composite, Angular Greek with Necking, Scamozzi with Necking, Renaissance, and Temple of Winds capitals, and for all other capitals, either according to Figs. 2 or 3, whichever way the neck of shaft is turned.

Wood Dowels

Dotted lines indicate wood dowel, or core, which is to be used to carry the weight imposed on the column. This should be made about $\frac{1}{8}$ inch longer than height of caps, so that the weight of the soffit will rest on a wood dowel and not on the cap. For capitals with 5 and 11-inch neck diameters make diameter 2 inches smaller in diameter; 12/16 inch, $2\frac{1}{2}$ inches smaller; for 17/24 inch, $3\frac{1}{2}$ inches smaller; and 25/30 inch, 4 inches smaller.

Pilaster Caps

Unless otherwise specified, pilaster caps will be furnished with same shaft measurements as column capitals and returning one-half. Note line drawing of section of columns and pilasters, shown on page 5 before ordering.

NOTE.—Owing to the great difference in freight rates to different points in the country, it is difficult to quote an intelligent delivered price on our printed price list, but to enable the customer to arrive at the cost of a column delivered to his station, we give herewith the approximate shipping weights, with the freight rate to nearest freight station.

The freight rate to your station is

Caution should be taken before giving Railroad Company a receipt upon receiving goods to see that shipment is intact and items correspond with the bill of lading; also that shipment is in first-class condition. If not, protect yourselves by having agent make proper notation on the expense bill as to the damage or shortage so that you will have your claim properly substantiated.

Our responsibility ceases after shipment is delivered to the Railroad at Chicago, at which time we receive a clear receipt showing shipment received in first-class condition; therefore we cannot make any allowances for shortage or damage occurring while in transit. All prices F. O. B. Chicago.
